

CAN YOU RESTORE FROM YOUR BACKUPS RIGHT NOW?

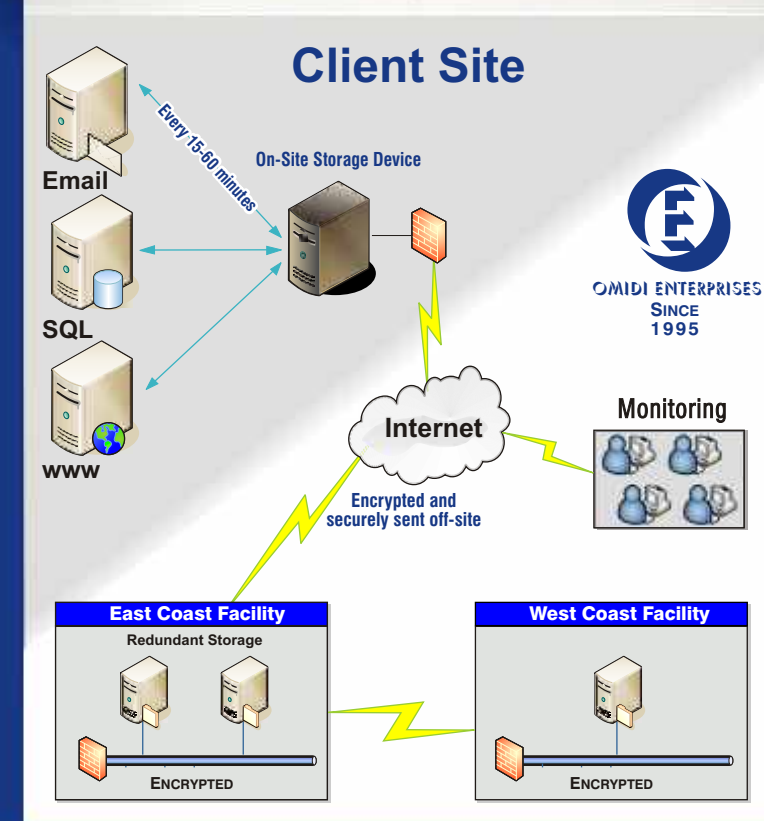

What do you do next?

Are you sure your backups work? Are you sure you can restore your files right now? Have you tested a successful restore lately? When was the last time you checked the backups' **AND** the restore's effectiveness? Are you backing up **ALL** of your important files?

What good is your backup if your **servers** are not functioning?

Automated Disaster Recovery (ADR):

- Automated backups at your site (every 15 minutes) + off-site
- Fill that gap in your Business Continuity Plan (BCP)
- Decrease server down time by virtualizing the problematic server
- We monitor and test the backup process
- Off-site, encrypted, secure storage of your server's data
- See the video
